PRODUCT INFORMATION GUIDE

25,000 GPD RO Plants in the UAE

Request a 25,000 GPD reverse osmosis plant quotation for commercial or industrial use. Aqua Best supplies this capacity on a configuration-specific basis, with the proposed duty, equipment and installation scope confirmed in the quotation.

QUOTATION ONLY

Supply, installation and service requirements are reviewed for your location and equipment.

Equipment illustration. Final model and configuration are confirmed in the quotation.

Define what 25,000 GPD means for your project

Operating window	Average output needed for 94.6 m³/day
24 hours per day	Approximately 3.94 m³/hour.
20 hours per day	Approximately 4.73 m³/hour.
16 hours per day	Approximately 5.91 m³/hour.

Select the configuration from the feed-water analysis

Provide a representative water analysis and identify the source, such as a utility connection, storage arrangement or well. Different feed conditions can require different pretreatment and plant designs even where the requested daily output is identical.

The proposal should identify the membranes, pretreatment, pumps, instrumentation, controls and any supporting dosing equipment. Ask for the specified operating limits, water balance, power requirements and discharge arrangements. Confirm recovery, power consumption and rejection performance for the proposed configuration and feed water.

Agree the plant boundary before comparing quotations

A plant-only price is different from a complete installed package. Clarify feed storage, treated-water tanks, civil work, electrical connections, commissioning and any downstream distribution. Ask which elements are supplied by Aqua Best and which remain with the site contractor.

Aqua Best's published industrial range includes higher-capacity RO equipment. The final 25,000 GPD system is confirmed for the project; the photograph illustrates industrial RO equipment and is not a fixed specification for every quotation.

Installation and handover checklist

• Provide a current source-water analysis, intended use and required output with daily operating hours.

• Confirm the plant location, utilities, storage, connections and any concentrate or drainage arrangements.

• Ask for the proposed equipment duty, commissioning scope, handover records and maintenance responsibilities.

Common product questions

Is 25,000 GPD a guaranteed site output?

The proposed net duty must be stated with its operating conditions. Feed water, temperature, operating hours and the selected design influence the output that can be committed to in the quotation.

Do I need a water analysis before receiving a final design?

A representative analysis and a defined treatment target are important inputs to a suitable plant proposal. Send available results and discuss any missing information with the team.

Quotation, installation & after-sales support

Pricing	Quotation only. The written proposal identifies the equipment and included work.
AMC / servicing	Ask for an equipment-specific maintenance scope, consumables, exclusions and visit arrangements.
Warranty	Request the written warranty for the selected model, with coverage, exclusions and claim procedure.

Before requesting a quotation

Send your UAE location, intended use, water information, required flow or daily output, and photos of the installation space. For replacement parts, include the existing model and component labels.

Published ratings describe the listed equipment or configuration. Actual performance depends on feed water and operating conditions. Confirm the exact model, current specifications and manufacturer documentation in the quotation.
